JLTFs

- 1) DoD capability to process demand signals that are not requisitions
- 2) Network hosted business rules for sourcing and lateral redistribution
- 3) Industrial based responsiveness to demand signals
- 4) Broader global sourcing of material and services
- 5) Full integration of intel, operations, logistics and a net-centric environment in the Global Information Grid
- 6) DoD capability to document, translate, and manage commander's intent and situational awareness into appropriate logistics actions in an automated process
- 7) Expanding Combatant Commanders' directive authority

Logistics Roadmap

Background

Globalization & Defense Logistics (pre-LOE)

- More connectivity (overlapping resources)
- Greater gaps (have's / have not's)
- An International (public & private) Defense Industrial Base
- Shrinking defense resources (forces &/or budgets)
- Recovery from current operations
(Retrograde, Refit/Reset, Re-posture)
- Persistent operations (GWOT)
- Effectiveness vs. Efficiency
- Need-to-Know vs. Need-to-Share
